Beth:

Based upon Weston's Tank Inventory, There is only about 1 foot of material in 25141 and 2 feet of material in 281842. I would like to try to consolidate that material in one vacuum box since they are similar in nature.

Please look at the other tank inventory numbers to see what else we may consolidate based upon the volume of material. The density information is very important so it would be helpful to get that information soon.

The empty vac boxes that we are using weigh 11,300 pounds.

Truck Weight: 33,000 lbs

Box Tare Weight: 11,300 lbs

Material Weight Per Box: 35,000 lbs

Total Weight: 79,300 lbs
